Health Information Exchange

To develop and take full advantage of a patient-centered Health Information Exchange, we help you understand the information users need, its value to your business and clinical goals, and the way users interact with the data and each other.

A toolkit for data sharing.

Get the most out of your capabilities.

Sharing data outside of hospital walls is increasingly vital to the health system and continuum of care. It also requires integrating data-sharing workflows into your current processes. We help you set a strategy based on your business and clinical goals to use what you have and identify what you may need while helping you assess risks and liabilities. We also develop a plan to implement your strategy, taking into account other healthcare initiatives, such as Meaningful Use, Clinically Integrated Networks and Accountable Care Organizations, physician alignment or care coordination.

Finding what works.

Develop solutions for today — and tomorrow.

Today, hospitals and physician networks need to share patient health information like never before. Yet healthcare organizations must be able to acquire and exchange information among a range of applications and data. We help you develop a system that builds on your existing technology to integrate users and workflows, and allows you to adapt to the evolving needs of your health community.

Share information seamlessly.

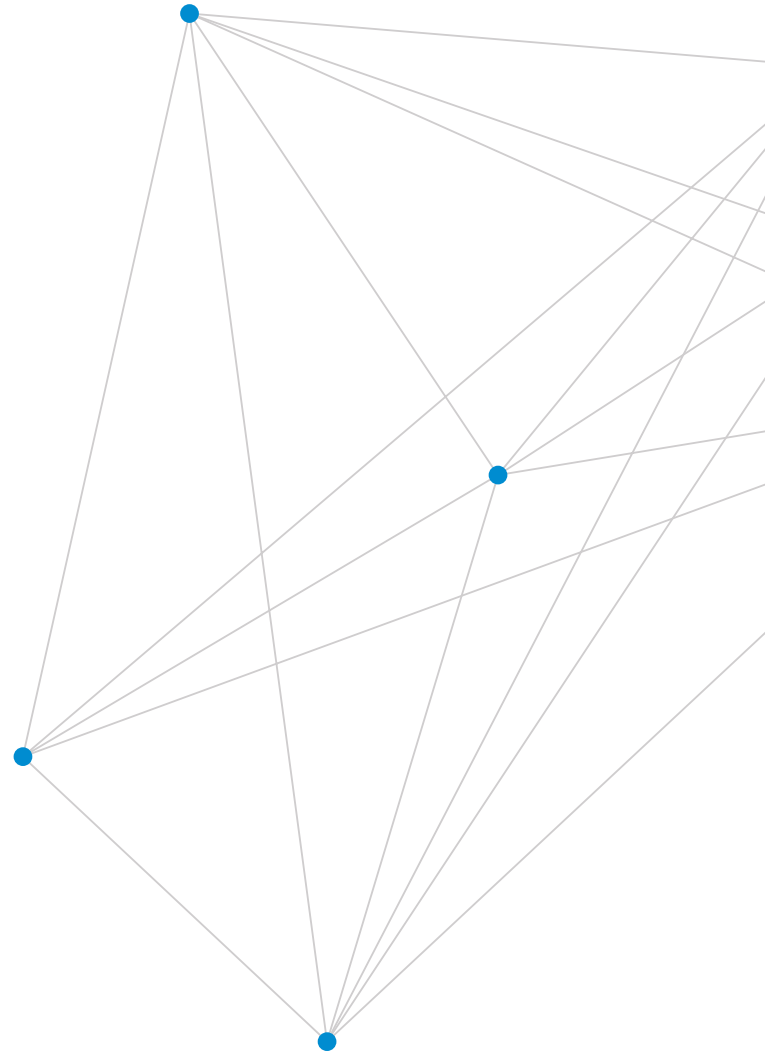

Create and support a successful HIE.

We help you navigate the organizational, technical and legal complexities of data exchange so you can securely and confidentially share information within an expanding community of patients and providers. We can help with everything from creating infrastructure to patient consent models to participation agreements and process improvements. We can also develop outreach procedures and help make sure your staff is trained to use and support your HIE.

Health Information Exchange

Our Expertise

- Electronic Health Records
- Patient Portals
- Analytics
- Workflows
- Revenue Cycle
- Patient Identity Management
- Strategic Planning and Program Management
- Infrastructure Analysis
- Process Improvement
- Vendor Assessment and Selection

Why Himformatics?

We ask "Why?"

We help you achieve your goals—and can even help you figure out what they are.

Rather than chasing the latest trend, we ask tough questions upfront to understand what you need to accomplish and why. We can help with everything from IT assessment and strategy to vendor selection, implementations, training, and measurement.

We get in the trenches.

We work shoulder to shoulder to get the job done.

Your organization is unique. Your strategy and tactics should be, too. We first understand how your organization works, where the biggest challenges to achieving your goals are, and how to address them.

We know healthcare and IT.

We apply years of lessons learned to help you succeed.

Many of us have held leadership positions in healthcare organizations and understand the challenges you face. We are uniquely positioned to apply both business understanding and technical knowledge to your situation.

Core Competencies

- Strategy and Assessment
