

How can I ensure my Meaningful Use initiatives aren't detracting from patient care?

What steps can I take to be prepared for an audit?

How do I plan for Stage 3 and what can I expect?

Meaningful Use

We help you develop, manage and gain the most value from your Electronic Health Record (EHR) technology to deliver the best care possible to your patients while keeping operations efficient and competitive.

Simplifying the complex.

Ensure patients remain your priority.

Meaningful Use can be confusing and overwhelming to caregivers and administrators alike. Our team of experts can show you how to stay focused on your patients while helping you understand, prepare for and leverage Meaningful Use to deliver better care. We can provide the tools, analytics, strategy and game plan you need to reach out to and connect with your communities through a Health Information Exchange (HIE) securely and efficiently.

Be prepared.

Audits are inevitable.

Regardless of whether you are in Stage 1 or 2, Meaningful Use audits have become a matter of "when" rather than "if." We help make sure you are prepared by developing comprehensive, written workflow policies and detailing the actions your organization will take when the audit occurs. We can also help you build and document those workflows in the first place.

Anticipating tomorrow.

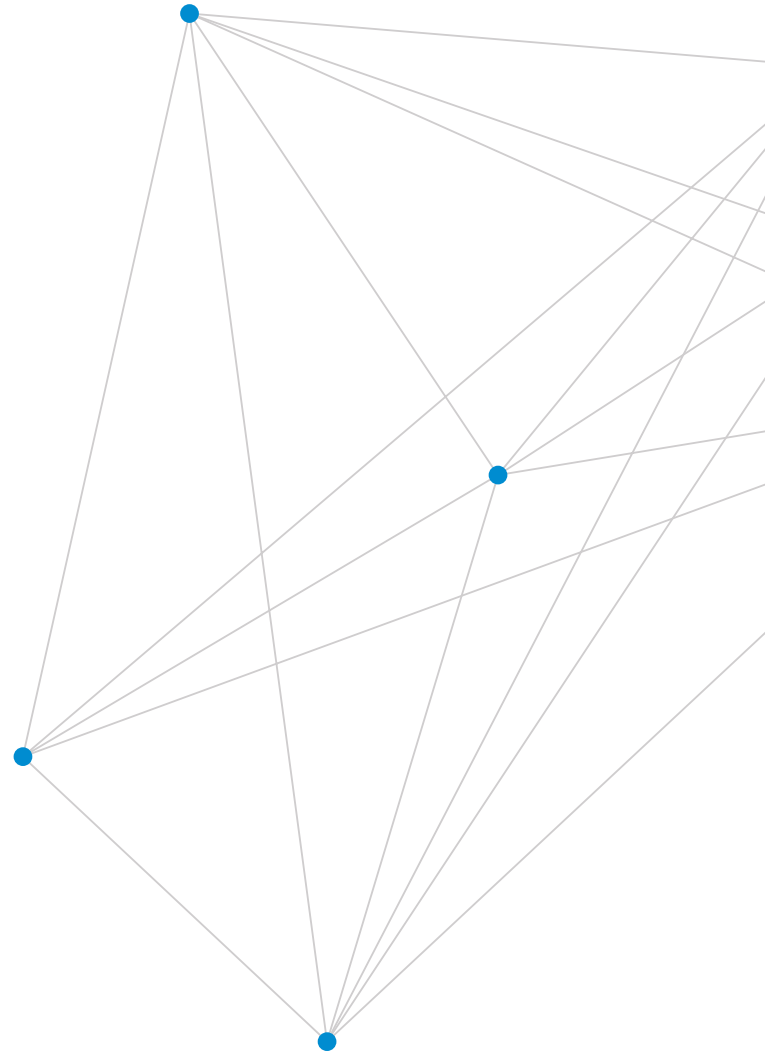

Sustaining Meaningful Use for the long term.

As most organizations try to achieve Meaningful Use Stages 1 and 2, Stage 3 seems light years away. But you can achieve sustainable Meaningful Use as part of an overall strategy for today and the future. We work with you to assess your current situation, analyze gaps and develop a practical plan to close those gaps, avoid penalties and achieve compliance at each stage.

Meaningful Use

Our Expertise

- Analytics
- Audit Readiness
- Collaboration Technologies
- Electronic Health Records selection
- Health Information Exchange (HIE)
- Technology Assessment and Optimization
- Optimization of Electronic Health Records/Business Systems
- Seamless Transition into Meaningful Use
- Infrastructure Security, Resilience and Scalability
- Workflows built around areas such as:
 - Clinical Flow
 - Computerized Physician Order Entry (CPOE)
 - Revenue Cycle

Why Himformatics?

We ask "Why?"

We help you achieve your goals—and can even help you figure out what they are.

Rather than chasing the latest trend, we ask tough questions upfront to understand what you need to accomplish and why. We can help with everything from IT assessment and strategy to vendor selection, implementations, training, and measurement.

We get in the trenches.

We work shoulder to shoulder to get the job done.

Your organization is unique. Your strategy and tactics should be, too. We first understand how your organization works, where the biggest challenges to achieving your goals are, and how to address them.

We know healthcare and IT.

We apply years of lessons learned to help you succeed.

Many of us have held leadership positions in healthcare organizations and understand the challenges you face. We are uniquely positioned to apply both business understanding and technical knowledge to your situation.

Core Competencies

- Strategy and Assessment
- Program and Project Management
- Workflow and Operational Improvement
- Implementation and Design
- Informatics

Focus Areas

- Business Intelligence and Analytics
