Process Redesign and Clinical Optimization

We help you take advantage
of your technology investments to
streamline care delivery processes
and ensure solid business practices
across your organization.

Think differently.

Focus first on the "what," then on the "how."

When you know what problem you are trying to solve, it is easier to assess and choose the
right solution. We help you focus first on what you need to accomplish, establish the long-term
vision, understand your ideal state and identify current obstacles. We work with you on how to
close any gaps and ensure efficient, cost-effective workflows. We help you set goals, measure
performance and adopt a method for ongoing improvement. The solution may entail people,
processes and/or technology. By focusing on the "what" first, we clearly define the problem
so we can then better envision the best possible solution.

Stay compliant without sacrificing care.

Deliver a safe, quality patient experience.

Shrinking reimbursements, budget pressures and healthcare regulations are forcing organizations
to search for ways to deliver compliant, high-quality care cost-effectively. Improving operational
processes allows you to take advantage of technology to care for patients more efficiently
and helps reduce clinical challenges in a complex business environment. We work with you to
understand your business and provider needs and incorporate them into actual workflows.
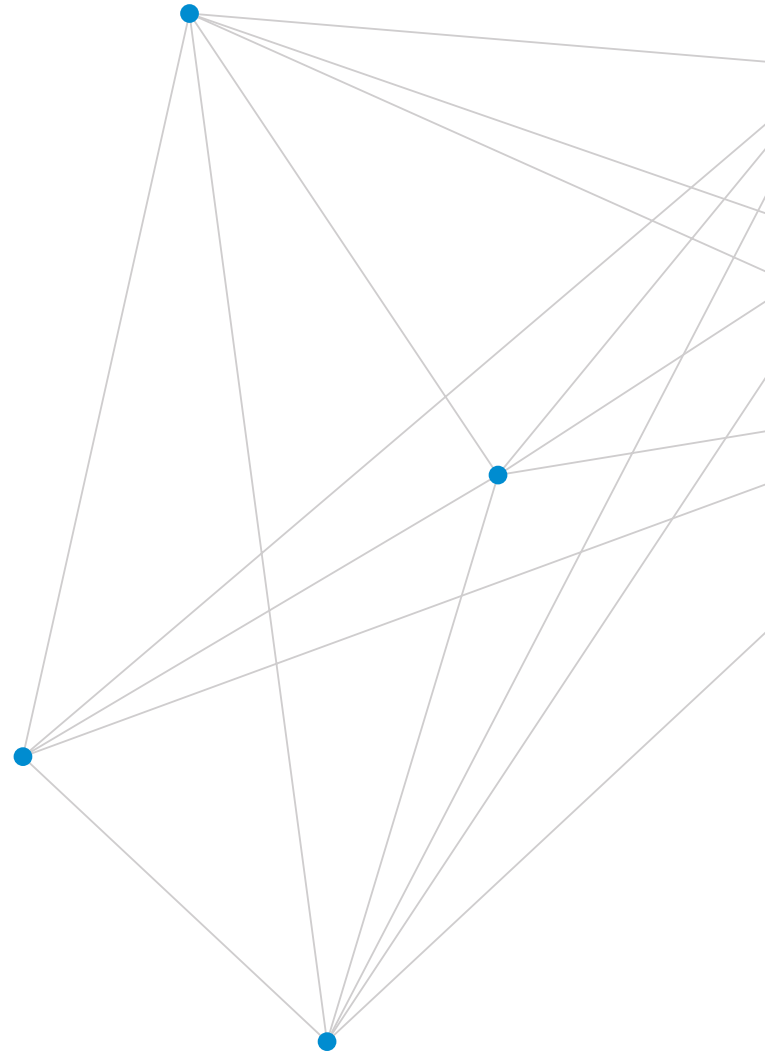

Engage and empower.

Take advantage of your team's knowledge.

Streamlining your operations means making sure your leadership is engaged and your providers
and staff feel empowered. We help facilitate conversations at all levels so those who are
responsible for the bottom line as well as those on the front lines have a chance to share how
work actually gets done and offer ideas on how to improve processes. We help you develop and
document efficient workflows that tie back to your goals.

Why Himformatics?

We ask "Why?"

We help you achieve your goals—and can even help you figure out what they are.

Rather than chasing the latest trend, we ask tough questions upfront to understand what you need to accomplish and why. We can help with everything from IT assessment and strategy to vendor selection, implementations, training, and measurement.

We get in the trenches.

We work shoulder to shoulder to get the job done.

Your organization is unique. Your strategy and tactics should be, too. We first understand how your organization works, where the biggest challenges to achieving your goals are, and how to address them.

We know healthcare and IT.

We apply years of lessons learned to help you succeed.

Many of us have held leadership positions in healthcare organizations and understand the challenges you face. We are uniquely positioned to apply both business understanding and technical knowledge to your situation.
